

DIRECTIONS:

The optimal temperature range for effectiveness is from 54 - 113 degrees F.

General Odor Control: Spray **Odor Zyme** directly on malodor and bacterial action to work. In restrooms, clean as normal, then spray **Odor Zyme** along the base of walls.

Drain Lines and Floor Drains: Apply 3-8 oz of **Odor Zyme** per day. Try to do so at the time of least activity. This will give the bacteria more time to begin activity. Do not run dishwashers shortly after use and do not use drain openers, disinfectants or any other chemical in the drains shortly after using **Odor Zyme**.

ODOR ZYME

Odor Control Agent

Odor Zyme is a blend of bacterial cultures that are non-toxic and non-pathogenic. These enzymes will multiply when exposed to wastes and excrete enzymes which reduce the content of fat, starch and protein in wastes. **Odor Zyme** contains 250 million CFU/mL of bacteria.
