

Super Bugs II

Hydrocarbon Remediation Liquid

2 Billion Plate Count per mL

Lowers Disposal Costs

1 Gallon Treats 100 Square Feet

Super Bugs II is for use in remediating hydrocarbons and other organics in soil. To assure optimal performance of these organisms, under the toughest conditions, they are produced and blended together with high potency nutrients and stimulants.

Super Bugs II contains organisms that will degrade a wide range of hydrocarbons including: gasoline, diesel, crude oil, benzene, toluene, ethyl benzene and xylene.

Super Bugs II naturally “digests” the hydrocarbon contaminants over time and can greatly reduce or completely eliminate disposal costs. Small spills can be remediated with just 1 gallon of product per 100 square feet of land. The soil must remain moist and should be turned or tilled to increase the amount of oxygen available to the “bugs”.
