

Dry Film

Anti-Seize Lubricating Film

Broad Temperature & Pressure Range

Contains No Silicones, Grease, Oil or Graphite

Low Coefficient of Friction

Impervious to Water, Oil, Alkali, and Many Acids

Dry Film is an aerosol spray, dry lubricating molybdenum which acts as a filler to fill the pores of metal surfaces and causes the metal to be as smooth as possible, reducing friction and wear.

Dry Film does not attract dust, dirt, or lint. It effectively lubricates while avoiding gum or sludge build-up. It is effective at temperatures between -10° F and $1,050^{\circ}$ F, and withstands pressures up to 100,000 psi.
